Adding a Kanopy video to Canvas

Locate the video in Kanopy found in the Library Databases

Click the Share icon and then the Embed link.

Note the number associated with the video (EX: 113268)

Go to the location inside Canvas where you want to place the video and copy the URL.

Example of link formatting and replacing the video number:

- Make sure to add the proxy address to allow for off-campus viewing
- Change the number at the end of the URL to your video’s number

*Using this link format ensures users off-campus can access the video. They need to go through our proxy to authenticate their enrollment status.*

In the Rich Text Editor view, click on the Link icon and paste in the URL.
